

GROWALL - LIVING GREEN WALL

GRO Living Wall is a living green wall system, creates a naturally lush environment, acts as a natural air filter, reduces energy needs for heating and cooling, and mitigates noise levels. Our GRO Living Wall system can be free standing or wall mounted for use in either indoor or outdoor spaces. The GRO design team can consult with you to choose which one of our systems works best for your application and budget. A GRO Living Wall system makes an aesthetically stunning statement, qualifies for LEED points, and provides health, economic, and environmental benefits.
